

Advanced technology for  
transforaminal injections

**NeuroTherm<sup>®</sup>**  
**TRUCATH<sup>®</sup>**  
Spinal Injection System

Cervical transforaminal injections carry an inherent risk of serious complications. The TRUCATH® Spinal Injection System is an innovative device specifically designed to keep the needle tip positioned away from sensitive structures.

- Blunt, flexible catheter designed to deflect off of vasculature and neural elements
- Side injection orifice for injection of contrast and therapeutic agents proximal of the catheter tip
- Visual and tactile direction indicator for desired orientation of needle bevel and deployment of catheter
- Radiopaque tantalum marker within the catheter tip for fluoroscopic visualization
- Microbore tubing with low flush volume

### Ordering information:

Item number	Description
7210110	TRUCATH Spinal Injection System, 22G x 1.8", 25G Catheter
7210111	TRUCATH Spinal Injection System, 20G x 4.5", 23G Catheter
